PYTHON C

Parquet floor sander PYTHON C for sanding parquet and plank floors

- An endless sanding belt runs over a sanding drum with grooved surface, achieving extraordinarily aggressive sanding.
- The endless sanding belt can be changed quickly and easily.
- The automatic sanding belt control keeps the sanding belt exactly in position.
- The required sanding pressure can be adjusted with the pressure regulator.
- Both the motor and the guide tube can be removed quickly for easier transport.

Gentle lowering and gentle lifting of the sanding drum:

The PYTHON C is fitted with a gentle lifting lever, to lower the sanding drum very gently onto the floor when sanding, and to lift it from the floor also very gently. This avoids unattractive starting marks. The gentle lifting lever for the sanding drum is under the right handgrip. The main lifting lever for the sanding drum is on the left handgrip.

Wood dust tested:

An excellent feature of the parquet floor sander PYTHON C is its effective dust collecting system. It has been tested for wood dust by the FPH Forschungs- und Prüfgemeinschaft Holzbearbeitungsmaschinen e.V. (research and testing society for wood processing machines), Frankfurt am Main. The parquet floor sanders VIPER, COBRA C and PYTHON C by FRANK are worldwide the only parquet floor sanders with endless sanding belt to be awarded this test symbol.
